

An IT infrastructure manager is responsible for overseeing the design, implementation, and maintenance of an organization's technology infrastructure. This includes managing hardware, software, networking, and security systems to ensure that they operate effectively and efficiently.

Responsibilities

1. Develop and implement IT infrastructure policies and procedures
2. Plan, design, and manage the implementation of new IT systems and infrastructure
3. Evaluate and recommend new hardware and software solutions to improve the infrastructure
4. Monitor the performance of the IT infrastructure and troubleshoot issues as needed
5. Ensure that the infrastructure is secure and meets industry standards for data protection
6. Manage and maintain all servers, networks, and other hardware
7. Install and configure software and applications
8. Develop disaster recovery and business continuity plans
9. Manage vendor relationships and negotiate contracts
10. Ensure compliance with relevant regulations and standards
11. Provide technical support to end-users
12. Train and supervise IT staff
13. Develop and manage IT budgets
14. Evaluate and recommend changes to IT policies and procedures
15. Conduct regular security audits and risk assessments
16. Stay up-to-date with emerging technologies and trends in the IT industry
17. Implement and maintain backup and recovery solutions
18. Manage and prioritize multiple projects simultaneously
19. Collaborate with other departments to ensure seamless integration of IT systems
20. Develop and maintain documentation for IT systems and procedures.
