

Patching Calendar

This table can serve as a helpful reference for organizing and tracking patch management activities across different IT systems, ensuring timely and effective patch deployment while prioritizing critical updates based on their impact on business operations and security. Adjust the table as needed to fit the specific requirements and preferences of your organization.

Date	System	Frequency	Patching Criticality	Notes
10/03/2024	End-user PCs	Weekly	High	Patch Tuesday updates
12/03/2024	Servers	Monthly	Critical	Server maintenance
15/03/2024	Network Devices	Quarterly	Medium	Scheduled maintenance
18/03/2024	Virtualization	Bi-annually	High	Hypervisor updates
22/03/2024	Software	As needed	Variable	Vendor releases

- Date:** Specifies the date of the patching activity.
- System:** Lists the IT systems that require patching, such as end-user PCs, servers, network devices, virtualization platforms, and software applications.
- Frequency:** Indicates how often patches are applied to each system, whether it's weekly, monthly, quarterly, bi-annually, or as needed.
- Patching Criticality:** Describes the criticality level of patching for each system, such as high, critical, medium, or variable.
- Notes:** Provides additional details or comments regarding the patching activity, such as specific patch releases, maintenance schedules, or any relevant information.
