

Lots of meetings

IT managers may be required to attend a variety of meetings, both internal and external, as part of their responsibilities. For example, they may need to attend meetings with other departments within their organization to discuss and coordinate projects and initiatives, as well as attend meetings with suppliers and vendors to negotiate contracts and resolve any issues. They may also be required to attend regular status updates with their team and management to provide updates on ongoing projects and initiatives. Additionally, they may be required to attend industry-specific events and conferences to stay up-to-date with the latest trends and technology in their field. As such, the frequency and type of meetings attended by an IT manager can vary greatly, but it is a common part of their role.

Some Meetings include –

1. **Team meetings:** Regular meetings with the IT team to discuss project status, progress, and priorities, as well as address any concerns or issues. These could include Tech Operations, Capacity and Security meetings.
2. **Management meetings:** Meetings with senior management to present project updates, status reports, and proposals for future initiatives.
3. **Vendor meetings:** Meetings with suppliers and vendors to discuss product options, negotiate contracts, and resolve any issues.
4. **Customer/stakeholder meetings:** Meetings with internal or external customers to understand their needs, prioritize projects, and resolve any issues.
5. **Budget and resource allocation meetings:** Meetings to discuss the IT budget and allocate resources to various projects and initiatives.
6. **Risk management meetings:** Meetings to assess and mitigate risks associated with IT projects and initiatives.
7. **Incident response meetings:** Meetings to respond to and resolve any incidents that may impact the IT infrastructure and systems.
8. **Training and development meetings:** Meetings to discuss training and development opportunities for the IT team.
9. **Industry-specific events and conferences:** Meetings to stay up-to-date with the latest trends and technology in the IT field.
